                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        508 ATACAACTGGTTCCTCCGTGACTCTGGGATGCCTGGTCAAGGGCTACTTCCCTGAGTCAG
                                                                                                                                                                                                     Novel recombinant monoclonal antibody with 4010-hybridoma type specificity useful in diagnostic procedures, especially for detection of phosphotyrosine-containing proteins in a sample .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     specificity. The 3' region of the coding sequence comprises a sequence encoding a histidine tag, and was introduced into the 4G10 heavy chain cDNA by site-directed mutagenesis using the oligonuclectide given in ABL56973. The amended heavy chain cDNA was cloned into a eukaryotic vector and, with a vector for the 4G10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kinases, for affinity purification of phosphotyrosine proteins and for determining the tyrosine phosphorylation status of one or multiple proteins in a given cell or tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                biological/medical research, in diagnosis of a variety of diseases including cancers, to identify cellular substrates for tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     light chain, was used to produce a tagged, secreted, functional recombinant monoclonal antibody in transfected mammalian cells. The recombinant antibody is useful for detecting the presence of phosphotyrosine-containing proteins in a sample, for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the coding sequence for the heavy chain of a recombinant monoclonal antibody having 4G10 hybridoma-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         68.3%; Score 1084; DB 24; Length 1389; 87.2%; Pred. Novel recombinant monoclonal antibody with 4G10-hybridoma type specificity useful in diagnostic procedures, especially for detection of phosphotyrosine-containing proteins in a sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the coding sequence for the heavy chain of a recombinant monoclonal antibody having 4G10 hybridoma-type specificity. It was obtained by PCR amplification of 4G10 hybridoma cDNA using a 5' primer (see ABL56699) based on the N-terminal sequence of the heavy chain and a 3' primer (see ABL56970) based on prior knowledge of the 4G10 monoclonal antibody. The heavy chain cDNA was cloned into a eukaryotic vector and, with a vector for the 4G10 light chain, was used to produce a secreted, functional recombinant monoclonal antibody in transfected mammalian cells. The recombinant antibody is useful for detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            presence of phosphotyrosine-containing proteins in a sample, for use in biological/medical research, in diagnosis of a variety of diseases including cancers, to identify cellular substrates for tyrosine kinases, for affinity purification of phosphotyrosine proteins and for determining the tyrosine phosphorylation status of

                                                                                                                                                                                                          The OK3T heavy chain sequence was isolated from a cDNA library prepared from OK3T producing cells. The library was screened with a probe complementary to a sequence in the mouse IgG2a constant CH1 domain region. The OK3T sequence was used in CDR-grafting experiments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             37 TICCIGAAGACACIGACICTAACCAIGGGAIGGAGCIGGAICTITCTITICCICCIGICA 96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neurotoxin monoclonal antibody M(alpha)2-3 was PCR-amplified from neurotoxin monoclonal antibody M(alpha)2-3 was PCR-amplified from neurotoxin monoclonal antibody M(alpha)2-3 was PCR-amplified from the neurotoxin monoclonal antibody M(alpha)2-3 was PCR-amplified from the chain fragment (VL + CL) was amplified from the same source using primers AAQ48041 and AAQ48042. The two amplified fragments were inserted into the same vector; the H-chain fragment was inserted (in-frame) between codons 6-7 of the phoA coding sequence and the L-chain fragment was inserted into a cassette which contained a phoA S-D sequence, a signal peptide and the first 6 codons of phoA. The cassette was positioned between the transformation codon and the transcription termination sequence of phoA. The fusion construct is expected to to encode a hybrid protein comprising two identical Ab-derived units. The invention also covers hybrid proteins containing two different Ab-derived units (i.e. to produce blobA. The hybrid molecules can be used as cell-targetting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunogenic compositions comprising Flt-3 ligand encoding polymuclectide and one or more antigen, or cytokine encoding polymuclectides, useful for suppressing tumour growth and for treating autoimmune diseases (e.g. rheumatoid arthritis)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of patient-specific bicistronic chimeric idiotype VR1642 (plasmid VAXID), which is used to treat b-cell lymphome patients. The plasmid includes the cytomegalovirus immediate-early promoter, enhancer and 5' untranslated sequences, driving the expression of mouse-human chimeric immunoglobulin light and heavy chain sequences. The human light and heavy chain variable regions are derived from B-cell lymphoma cell line RAMOS. The transcriptional terminator region includes polyA and termination signals from the bovine growth hormone gene. According to the invention, co-administration of VR1642 with a plasmid (see AAF30314) encoding human Fms-like tyrosine kinase (Fit-3 ligand) provides a means of treating a patient with B-cell lymphoma.
                                                                                                                                                                                                                                                                                                                                                                   immunotherapy; therapy; tumour; lymphoma; gene therapy; VR1642;

```
nultimeric complex comprising a first jor histocompatibility complex (MHC) class combinant single chain MHC class II molecule, on a betal domain linked through an timerisation domain. The first and the through the multimerisation domain to form complex is useful for treating autoimmune treating insulin dependent diabetes, is useful forts, pernicious anaemia, autoimmune sumatoid arthritis and systemic lupus sequence encodes a single chain MHC
                                                                                                         AGAAAACAGATTCCTTCTCATGCAACGTGAGACACGAGG 1416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5' untranslated sequences, driving the expression of mouse immunoglobulin kappa light and gamma 1 heavy chain constant regions. The transcriptional terminator region includes polyA and termination signals from the bovine growth hormone gene. Tumour-specific variable regions from a patient can be PCR amplified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and cloned into this vector to produce the patient's individual vaccine construct. The light and heavy chain variable regions from the B-cell lymphoma cell line RAMOS were amplified and cloned into VR1632 to provide test vaccine construct VR1642 (see AAF30316). According to the invention, co-administration of VR1642 with a plasmid (see AAF30314) encoding human Fms-like tyrosine kinase (Flt-3 ligand) provides a means of treating a patient with B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  includes the cytomegalovirus immediate-early promoter, enhancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of bicistronic plasmid VR1632, which
